UNIVERSITY OF MADRAS

BACHELOR OF COMPUTER APPLICATIONS (BCA) DEGREE PROGRAMME

SYLLABUS WITH EFFECT FROM 2023-2024

Year : I Semester: II

Object Oriented Programming using C Common for B.C.A. , B.ScSA	++	120C2A
Credits 5	Lecture Hours:4 per week	
 Learning Objectives: (for teachers: what they have to do in the class/lab/field) To engender an appreciation for the need and characteristics of Object-orientation. To impart knowledge of the C++ language grammar in order to design and implemen programming solutions to simple problems by applying Object-oriented thinking. 		
Course Outcomes: (for students: To know what they ar CO1: Explain the various basic concepts of Object-orie CO2: Write programs to implement static binding CO3: Write programs to implement inheritance and dy CO4: Write programs to implement templates and exce STL class library.	entation.	

CO5: Write programs implementing File and Stream I/O.

object-orientation – Abstraction – Encapsulation – Modularity – Hierarchy. Basic Elements of C++: Classes – Objects – Data members and member functions – private and public access specifiers - Static members - Constructors – Singleton class – Destructors - Friend Functions and Friend Classes - Array of objects – Pointer to objects - this pointer – References – Dynamic memory allocation - Namespaces. II Function Overloading: Overloading a function - Default arguments – Overloading Constructors. Operator Overloading: Overloading an operator as a member function – Overloading an operator as a friend function – Overloading the operators [], (), -> and comma operators – Conversion Functions.		
object-orientation – Abstraction – Encapsulation – Modularity – Hierarchy. Basic Elements of C++: Classes – Objects – Data members and member functions private and public access specifiers - Static members - Constructors – Singleton class Destructors - Friend Functions and Friend Classes - Array of objects – Pointer to objects - this pointer – References – Dynamic memory allocation - Namespaces. II Function Overloading: Overloading a function - Default arguments – Overloading Constructors. Operator Overloading: Overloading an operator as a member function – Overloading an operator as a friend function – Overloading the operators [], (), -> and common operators – Conversion Functions. III Inheritance: Types of inheritance – protected access specifier –Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().	Units	Contents
Basic Elements of C++: Classes – Objects – Data members and member functions – private and public access specifiers - Static members - Constructors – Singleton class Destructors - Friend Functions and Friend Classes - Array of objects – Pointer to objects - this pointer – References – Dynamic memory allocation - Namespaces. II Function Overloading: Overloading a function - Default arguments – Overloading Constructors. Operator Overloading: Overloading an operator as a member function – Overloading an operator as a friend function – Overloading the operators [], (), -> and common operators – Conversion Functions. III Inheritance: Types of inheritance – protected access specifier –Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().	Ι	Object Oriented Programming Concepts: Complexity in software - The need for
private and public access specifiers - Static members - Constructors - Singleton class Destructors - Friend Functions and Friend Classes - Array of objects - Pointer to objects - this pointer - References - Dynamic memory allocation - Namespaces. II Function Overloading: Overloading a function - Default arguments - Overloading Constructors. Operator Overloading: Overloading an operator as a member function - Overloading an operator as a friend function - Overloading the operators [], (), -> and comma operators - Conversion Functions. III Inheritance: Types of inheritance - protected access specifier -Virtual Base Class - Base class and derived class constructors. Run-time Polymorphism: Virtual Functions - Function overriding - Pure virtual function - Abstract base class. IV Templates: Function templates - Overloading a function template - Class templates. Standard Template Library (STL): Containers: vector, list - Iterators: forward backward - Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions - try, catch, throw - Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		object-orientation – Abstraction – Encapsulation – Modularity – Hierarchy.
Destructors - Friend Functions and Friend Classes - Array of objects - Pointer to objects - this pointer - References - Dynamic memory allocation - Namespaces. II Function Overloading: Overloading a function - Default arguments - Overloading Constructors. Operator Overloading: Overloading an operator as a member function - Overloading an operator as a friend function - Overloading the operators [], (), -> and common operators - Conversion Functions. III Inheritance: Types of inheritance - protected access specifier - Virtual Base Class - Base class and derived class constructors. Run-time Polymorphism: Virtual Functions - Function overriding - Pure virtual function - Abstract base class. IV Templates: Function templates - Overloading a function template - Class templates. Standard Template Library (STL): Containers: vector, list - Iterators: forward backward - Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions - try, catch, throw - Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		Basic Elements of C++: Classes – Objects – Data members and member functions –
objects - this pointer - References - Dynamic memory allocation - Namespaces. II Function Overloading: Overloading a function - Default arguments - Overloading Constructors. Operator Overloading: Overloading an operator as a member function - Overloading an operator as a friend function - Overloading the operators [], (), -> and commo operators - Conversion Functions. III Inheritance: Types of inheritance - protected access specifier -Virtual Base Class - Base class and derived class constructors. Run-time Polymorphism: Virtual Functions - Function overriding - Pure virtual function - Abstract base class. IV Templates: Function templates - Overloading a function template - Class templates. Standard Template Library (STL): Containers: vector, list - Iterators: forward backward - Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions - try, catch, throw - Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		private and public access specifiers - Static members - Constructors - Singleton class -
 Function Overloading: Overloading a function - Default arguments - Overloading Constructors. Operator Overloading: Overloading an operator as a member function - Overloading an operator as a friend function - Overloading the operators [], (), -> and comma operators - Conversion Functions. III Inheritance: Types of inheritance - protected access specifier -Virtual Base Class - Base class and derived class constructors. Run-time Polymorphism: Virtual Functions - Function overriding - Pure virtual function - Abstract base class. IV Templates: Function templates - Overloading a function template - Class templates. Standard Template Library (STL): Containers: vector, list - Iterators: forward backward - Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions - try, catch, throw - Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate(). 		Destructors - Friend Functions and Friend Classes - Array of objects - Pointer to
Constructors. Operator Overloading: Overloading an operator as a member function – Overloading an operator as a friend function – Overloading the operators [], (), -> and comma operators – Conversion Functions. III Inheritance: Types of inheritance – protected access specifier –Virtual Base Class - Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		objects - this pointer - References - Dynamic memory allocation - Namespaces.
Operator Overloading: Overloading an operator as a member function – Overloading an operator as a friend function – Overloading the operators [], (), -> and comma operators – Conversion Functions. III Inheritance: Types of inheritance – protected access specifier –Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().	II	Function Overloading: Overloading a function - Default arguments - Overloading
an operator as a friend function – Overloading the operators [], (), -> and common operators – Conversion Functions. III Inheritance: Types of inheritance – protected access specifier –Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions – Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		Constructors.
III Inheritance: Types of inheritance – protected access specifier –Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		Operator Overloading: Overloading an operator as a member function – Overloading
Inheritance: Types of inheritance – protected access specifier –Virtual Base Class – Base class and derived class constructors. Run-time Polymorphism: Virtual Functions – Function overriding - Pure virtual function – Abstract base class. IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions – Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		an operator as a friend function - Overloading the operators [], (), -> and comma
Base class and derived class constructors. Run-time Polymorphism: Virtual Functions—Function overriding - Pure virtual function — Abstract base class. IV Templates: Function templates — Overloading a function template — Class templates. Standard Template Library (STL): Containers: vector, list — Iterators: forward backward — Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions — try, catch, throw — Rethrowing an exception—Restricting exceptions—Handling exceptions in derived classes—terminate(), abort() unexpected(), set_terminate().		operators – Conversion Functions.
- Function overriding - Pure virtual function - Abstract base class. IV Templates: Function templates - Overloading a function template - Class templates. Standard Template Library (STL): Containers: vector, list - Iterators: forward backward - Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions - try, catch, throw - Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().	III	Inheritance: Types of inheritance – protected access specifier –Virtual Base Class –
IV Templates: Function templates – Overloading a function template – Class templates. Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		* *
Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		– Function overriding - Pure virtual function – Abstract base class.
Standard Template Library (STL): Containers: vector, list – Iterators: forward backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().	TX7	Townslates: Evention townslates Organization of wation townslate. Class townslates
backward – Algorithms: removing and replacing elements, sorting, counting reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().	10	
reversing a sequence. Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception - Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		
Exception Handling: Exceptions – try, catch, throw – Rethrowing an exception – Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		
Restricting exceptions - Handling exceptions in derived classes - terminate(), abort() unexpected(), set_terminate().		<u> </u>
unexpected(), set_terminate().		
	V	• "
manipulator – Overloading << and >> operators.	"	
		File I/O: fstream class – Opening and closing a file – Reading from and writing to a
		text file - Unformatted and Binary I/O – Random access I/O.
	1	text file - Uniormatted and Binary I/O – Kandom access I/O.
